FOCUS AREAS
API Development
Cross-Border
PCI DSS

THE CHALLENGE

Global enterprises increasingly need to pay vendors, partners, and employees in China—but traditional banking infrastructure moves too slowly, costs too much, and lacks the flexibility modern businesses require. The client sought to create an API-first solution enabling foreign companies to initiate compliant, cost-effective payments to Chinese recipients.

THE APPROACH

We architected and delivered a comprehensive B2B payment platform encompassing APIs, administrative tooling, and compliance infrastructure.

Enterprise API Suite

The REST API platform enables programmatic payment initiation with sophisticated business logic:

- Dynamic Fee Calculation:** Configurable transaction fee structures with markup rules
- Real-Time FX Management:** Live exchange rates with spread configuration
- Wallet Functionality:** Pre-funded balance management for high-volume senders

Compliance & Security Infrastructure

Financial services demand rigorous security and auditability. We implemented maker/checker workflows for dual-approval fund management, complete audit trails for regulatory reporting, and architecture enabling successful PCI DSS certification.

Operations Portal

The administrative interface provides real-time rate monitoring, transaction tracking, and comprehensive compliance reporting—giving operations teams full visibility into payment flows.

THE IMPACT

OUTCOME	RESULT
Transaction Volume	\$5M+ USD processed monthly
Compliance Achievement	PCI DSS certified platform
Market Reach	Connected to 400+ institutions across 9 countries
Operational Excellence	Automated processing with minimal manual intervention
Knowledge Transfer	Successful handover to internal team for ongoing maintenance

The platform continues to scale, supporting the growing demand for transparent, compliant China cross-border payments.

PLATFORM CAPABILITIES

A full-featured B2B payment platform enabling foreign companies to pay vendors in China with real-time FX, configurable fees, and complete regulatory compliance.
