

CASE STUDY 02

Leading Hong Kong Mobility Platform

Building the Payment Backbone for Urban Transportation

INDUSTRY Transportation & Mobility	ENGAGEMENT Team Work	FOCUS AREAS Payments Fintech Reconciliation
---------------------------------------	-------------------------	---

THE CHALLENGE

As ride-hailing platforms reshape urban mobility across Asia, the underlying payment infrastructure must deliver reliability, speed, and flexibility at scale. A rapidly growing Hong Kong-based mobility platform required a payment ecosystem capable of supporting its ambitious growth trajectory while navigating the unique complexities of the local market.

The platform needed to accept every payment method their riders preferred—from international cards to local digital wallets—while simultaneously managing the intricate financial flows between riders, drivers, and payment networks.

The everyday icon at the heart of urban mobility.

THE APPROACH

We architected and delivered an enterprise-grade payment infrastructure designed for the specific demands of marketplace platforms.

Multi-Rail Payment Gateway

The solution integrates across the full spectrum of Hong Kong payment methods:

Card Networks: Visa, Mastercard, UnionPay (CUP)

Digital Wallets: Alipay, WeChat Pay

Local Payment Rails: Octopus Card integration

Both online (in-app) and offline (terminal-based) payment flows are supported through a unified integration layer.

Master Merchant Architecture

We designed and implemented a sophisticated sub-merchant management system enabling the platform to operate as a master merchant. The architecture handles automated fund distribution, transparent fee calculations, and settlement orchestration across drivers, the platform, and payment providers.

Automated Reconciliation Engine

High-volume transaction environments demand precision. Our reconciliation system processes daily transaction flows across multiple payment rails, eliminating manual matching processes and enabling same-day financial visibility.

The tap that settles across every rail.

THE IMPACT

OUTCOME	RESULT
Rider Experience	Frictionless payment across all major Hong Kong payment methods
Operational Automation	Fully automated reconciliation—zero manual intervention
Platform Scalability	Architecture supports the city's 40,000+ taxi driver network
Financial Transparency	Real-time settlement visibility for all marketplace participants

TECHNICAL HIGHLIGHTS

- 6+ payment methods integrated

Online & Offline payment flows
- Same-day reconciliation

Automated sub-merchant settlement
